

Unilever

BENCHMARK

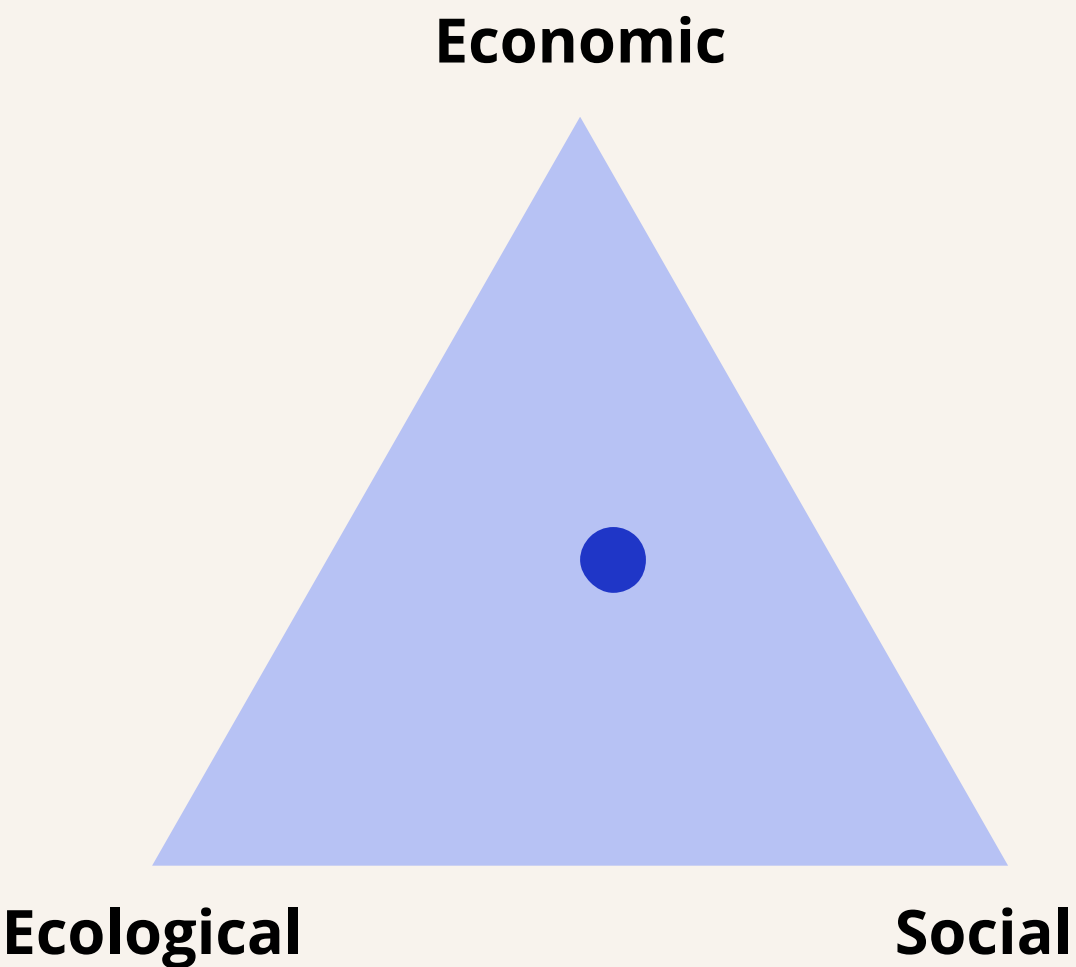

Unilever | Bulk Refill Stations in stores

Country: UK | Creation Date: 1930 | Annual Revenue: \$60b | Sector: Food and Hygiene | Market: Worldwide

Scalability

	Obstacles	Drivers
Desirability LowHigh	- Adoption of consumer behaviour - Logistics and infrastructure constraints - Hygiene concerns	- A commitment to sustainable solutions - Economic benefits - Customisation and flexibility
Viability LowHigh	- High initial investment costs - Uncertain short-term profitability - Dependence on partnerships and integration into the supply chain	- Reduced packaging costs - Loyalty and recurring revenues - Enhanced brand image and competitive advantages
Feasibility LowHigh	- Technical complexity and implementation of specific infrastructures - Coordination with distributors and adaptation of points of sale	- Expertise in logistics and product innovation - Availability of proven technologies

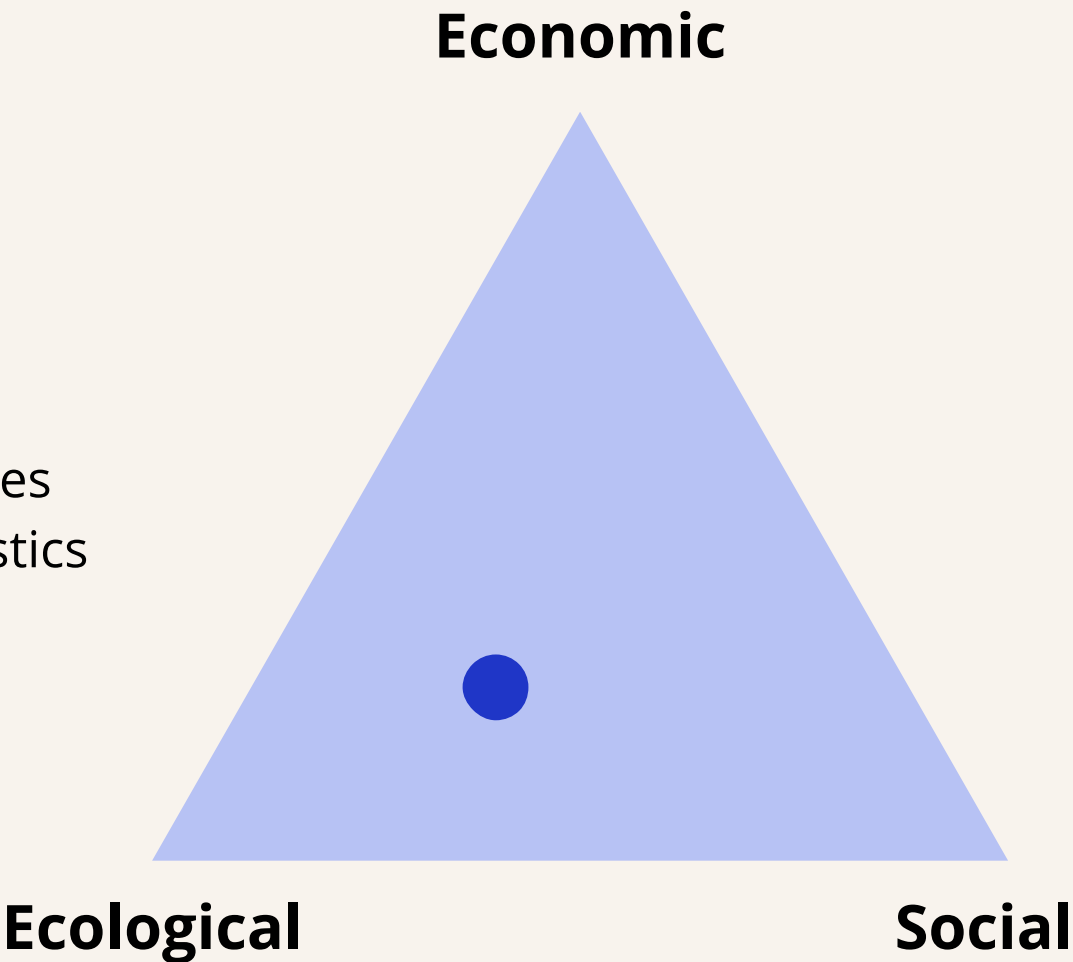

Unilever | Solid & Waterless Product Formats

Country: UK | Creation Date: 1930 | Annual Revenue: \$60b | Sector: Food and Hygiene | Market: Worldwide

Scalability

	Obstacles	Drivers
Desirability LowHigh	- Sensory reluctance and perceived experience - Inertia of buying habits - Insufficient communication on benefits	- Search for authenticity and naturalness - Greater ecological commitment - Customised use
Viability LowHigh	- Investment in R&D and costly reformulation - Unproven business models - Complex regulations	- Access to finance and government incentives - Significant reduction in packaging and logistics costs - Creation of a premium market position
Feasibility LowHigh	- Lack of specialised in-house skills - Guaranteeing the stability and performance of new formulations	- Pilot phases and progressive testing - Use of emerging production technologies

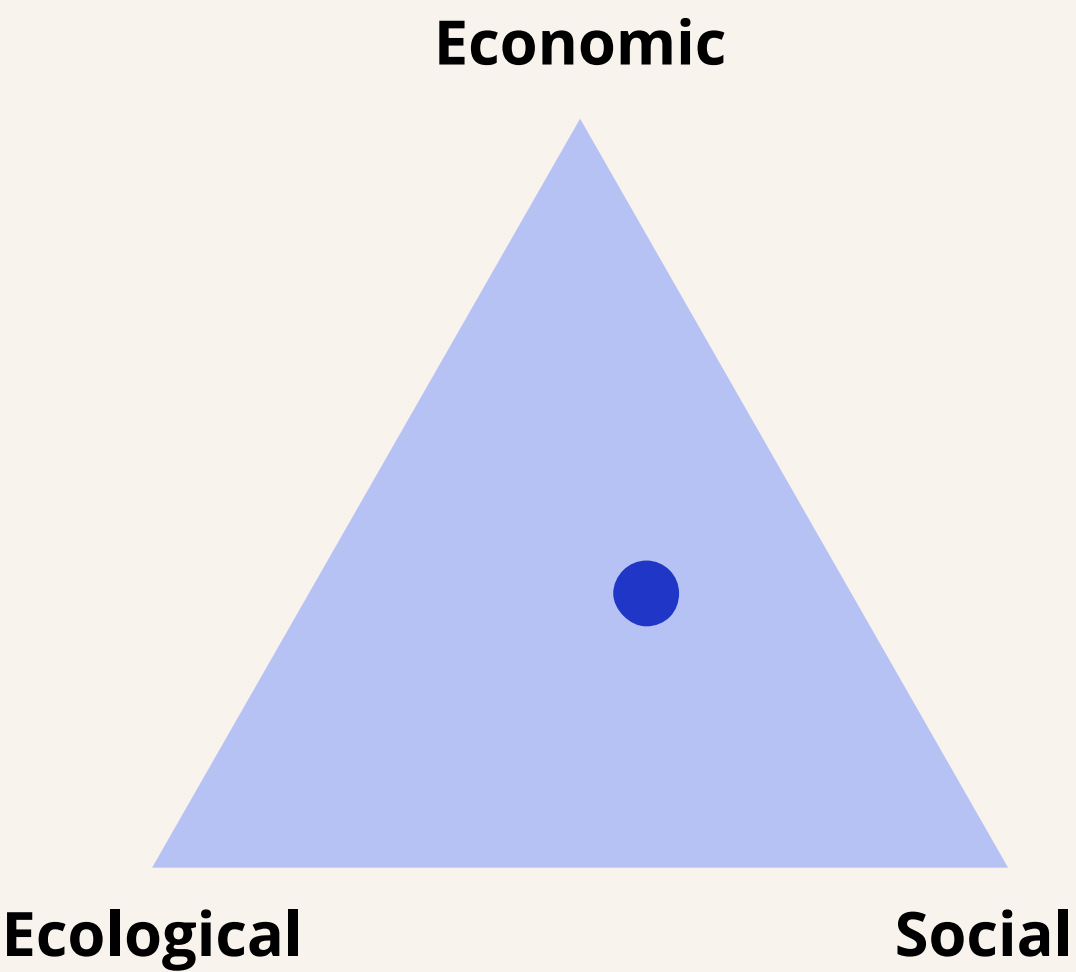

Unilever | Upcycled Plastic & Organic Waste Packaging

Country: UK | Creation Date: 1930 | Annual Revenue: \$60b | Sector: Food and Hygiene | Market: Worldwide

Scalability

	Obstacles	Drivers
Desirability 	- Aesthetics perceived as 'less premium' - Consumer mistrust of safety - Lack of awareness of upcycling	- Strong narrative around circularity - Marked differentiation on the shelf - Greater ecological credibility
Viability 	- Irregular supply chains - High processing costs - Limited scale of production for the moment	- Internal recovery of waste - Access to CSR/innovation funding - Creation of marketing and media value
Feasibility 	- Technical complexity of blends - Lack of clear industrial standards - Machine adaptation costs	- Compatibility with short circuits - Flexibility of new composite materials - In-house expertise in packaging + R&D available

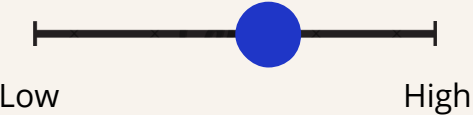

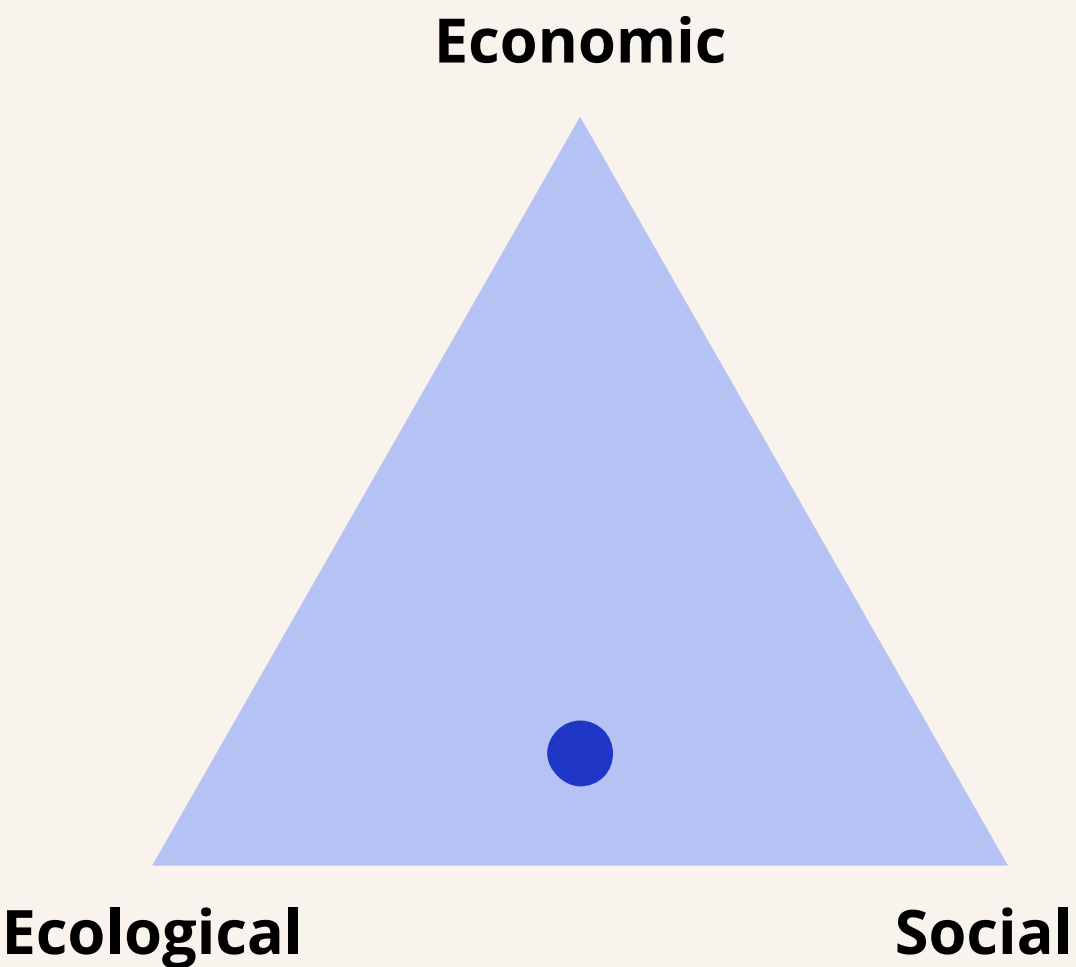

Unilever | Restoring Endangered Ecosystems Within the Supply Chain

Country: UK | Creation Date: 1930 | Annual Revenue: \$60b | Sector: Food and Hygiene | Market: Worldwide

Scalability

	Obstacles	Drivers
Desirability 	- Complexity of perceiving the link between environment and product - Risk of scepticism about greenwashing initiatives	- Strengthening brand credibility - Growing stakeholder support - Alignment with responsible consumer trends
Viability 	- Risks associated with natural hazards and ecosystem variability - Significant and uncertain financial investment	- Reduced supply chain risks - Creation of a differentiating competitive advantage
Feasibility 	- Complex multi-stakeholder coordination - Long-term impact monitoring and assessment	- Pilot experiments and feedback - Existing environmental management expertise
